THIS WEEK IN AVISTRATA

A marketplace, a web store, fuel orders and a busy week for Flight School.

Here is what we shipped from October 12 to 19. All of it is live for Avistrata customers today. The new iPhone and Android apps are coming soon to the App Store and Google Play.

MRO Marketplace | Web store | Fuel orders | Aircraft-down alerts | Flight School | Email and text | Offline apps | Face ID

THE HEADLINES

What you can do now

MRO Marketplace NEW

Find contract pilots, flight instructors, A&P mechanics and IAs by type rating, hours, medical, Part 135 checks, specialty, make and model, and availability.

- We check certificates before a profile is listed
- Customers see names and contact details, and hire directly
- Reviews only from jobs the contractor confirmed
- Free to search at mrotracker.com/marketplace

Web store

Sell serviceable parts from Stores on your own web store, paid by card to your own Stripe account.

- Stock comes out of Stores automatically
- Put the store on your own website
- Order emails and staff access for the store
- A reminder when a buyer leaves a checkout unfinished, with one-click unsubscribe

Fuel orders

Order fuel from a flight, a check-in or a booking, on the website or in the Pilot, Student and Admin apps.

- The fuel provider gets an email link to confirm the order and mark it fueled, with no sign-in
- You get a push notification and an email at each step
- Fueled orders can be billed straight onto the invoice

Aircraft-down alerts

When an aircraft is grounded, overdue for maintenance that blocks dispatch, or marked out of service, everyone it affects hears about it.

- Pilots, students and instructors on each affected booking get a push, email or text, and so does dispatch
- Free aircraft of the same type are offered as alternatives

Flight School

- Move over from Flight Schedule Pro or Flight Circle, or export to Flight Schedule Pro
- Course library with 18 standard courses: certificates, ratings, CFI / CFII / MEI, endorsements, flight review, IPC and ground schools
- Simulator sessions from BLACKSTAR / Mindstar go into the logbook, lessons and billing
- Plane Rental calendar and collapsible sections

MRO Tracker Student app

- New app for iPhone and Android, coming soon to the App Store and Google Play
- Next flight on the Lock Screen with a countdown, plus an Android home-screen widget
- Students set up their own sign-in, get reminders and check in with "I'm here"
- Bookings show when an aircraft goes down, with alternatives

ALSO NEW

More from this week

Feature	What it does
Email and text messages	Message templates, send now or schedule for later, automatic messages and text replies. Account emails now come from Avistrata, with Avistrata branding.
Aircraft equipment and MEL	Equipment with serial numbers, hours, expiry dates and inspections. MEL deferrals with hour and cycle limits and part serials. Both are linked to Stores: see what's on the shelf, replace from stock on a task card, request a part, and see what's coming due.
Logbook signing on mobile	Mechanics review and sign logbook entries in the Mechanic app for iPhone and Android (coming soon).
Flight recording review	Review a recorded flight with its track on a map, and get the map in the flight recording report.
Apps that work offline	The Pilot, Mechanic and Admin apps show saved data without signal, and queue your changes and sign-offs until you're back in range.
Face ID and sign-in limits	Unlock the apps with Face ID or a fingerprint. Each organization can set an idle time and a maximum time before people have to sign in again, on the website and in the apps.
Airport weather and NOTAMs	Look up the weather (METAR) and NOTAMs for an airport, now or for a future time, in the mobile apps.
Dispatch on mobile	Release amendments, NOTOC, last-minute changes, training checks and approvals from the phone. The Admin app has a Flights tab with search, filters and a calendar.
Labor clock	Pause, resume and clock out from Home and Task Cards in the mobile apps.
Weekly Plan	Work week, week, 2-week and month views.
Organizations	Add groups and sub-organizations, set work order numbering per organization, move work orders between organizations, and copy templates from the Template Library.
Life-limited parts and BD	Life-limited parts tracking, Maintenance Due extensions and AMOCs, tool control audits, and the Business Development workspace, all covered in What's New in Avistrata 2.1.
Sign your license online	New customers can read and sign the MRO Tracker Customer License Agreement online.
Easier to use	The app's own message and confirm boxes everywhere, Close and Cancel in the same place on every window, a busy indicator on every button, and a reorganized Setup menu.
